PROJECTS

Hospital Management
Technologies used: HTML, CSS, JavaScript, Python and MY SQL

Key Features & Contributions:
• Developed a searchable database allowing patients to find specialists across various departments efficiently.
• Implemented a dynamic scheduling module that displays doctor availability based on specific dates and time slots, ensuring transparency for the user.
• Built backend logic to manage database entries, preventing double-booking and ensuring synchronized scheduling between doctors and patients.
• Integrated a multi-user login system (Admin, Doctor, and Patient) to ensure data privacy and personalized dashboards for different user roles.
